

## MACT ENVIRONMENTAL POLICY

MACT, producing air-conditioning products, implements Environment Management System to contribute to create a sustainable environment perception, in line with constant improvement principle and with an approach of constant technological developments and non-stop creativity.

In this sense, through its Environment Management System Policy, MACT undertakes;

- **Not to waste** by ensuring the **effective use of all natural resources** used and that constitutes the product,
- **To prevent damage to environment** by adopting international **waste management** hierarchy to manage waste produced during our activities,
- **To increase the use of sustainable resources and decrease greenhouse gas emission** through constant development, improvement and innovation,
- **To follow** local and national legal requirements and other international and sectoral requirements arising from Mitsubishi Electric's approach,
- **Keeping our environmental responsibility to the society in mind, to increase environmental awareness** in and out of the factory of our employees and their families,
- **To protect ecosystem and biodiversity** through **life cycle** starting from product development activities,
- **To protect air, soil and water with our hearts and technology for a better future.**
